(54) METHOD FOR RELATING IMAGE AND POSITION DATA

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a means capable of easily relating a photographed photo and map information even in a camera not equipped with a position decision means.

SOLUTION: By stamping positions on digital photos, the photos are conveniently put in order thereafter. However, almost all digital cameras are not provided with a position detection means. In order to solve this problem, this invention provides the means for separately recording position data (100) (by using a mobile telephone 20 for instance) at the time of photographing the photo (95) and connecting them with the photo later.
